Mode of Operation

8-channel transmitter with 8 voltage inputs (10 to 265 VAC/DC).

Each input may be coded individually by means of the code programmer GAP 1605. For details, please refer to the respective data sheet.

When a voltage (10 to 265 VAC/DC) is applied to terminal 25 (input 1), the transmitter transmits on the channel coded for input 1.

Whenever the voltage of the input is < 1 V, the transmitter

stops transmitting on the respective channel.

Notes:

- Terminals 4 and 24 are internally connected.
- Terminals 4 and 24 are common (minus).
